Problematic Situations To Be Solved

Unique classifier (adding the current existence of goods and services in the market)

Traceability of goods, services and inventory for central cost generation

Systematization and normalization for chart updates

Standardization of goods and services to optimize the public procurement system

Linkage of procurement classifier and COG

A Classifier that incorporates international criteria of classification and updates

Link together the procurement classifier with the UN classifier

First level
COG chapter

| Type | COG | | Description | Level |
|------|------|---|------------------------|-------|
| 1 | 2000 | 0 | Materials and supplies | 1 |
| 1 | 5000 | 0 | Property | 1 |
| 2 | 3000 | 0 | General services | 1 |
| 3 | 6000 | 0 | Public Work | 1 |

Second level
CUCOP=COG concept

| Type | COG | | Description | Level |
|------|------|---|---|-------|
| 1 | 2000 | 0 | Materials and supplies | 1 |
| 1 | 2100 | 0 | Materials and tools for administration and teaching | 2 |
| . | . | . | | . |

Third level
CUCOP=COG item

| Type | COG | | Description | Level |
|------|------|---|---|-------|
| 1 | 2000 | 0 | Materials and supplies | 1 |
| 1 | 2100 | 0 | Materials and tools for administration and teaching | 2 |
| 1 | 2101 | 0 | Materials and office tools | 3 |
| . | . | . | | . |

Fourth level CUCOP integrates
CABMSOP (aprox 9,000
records)

| Type | COG | | Description | Level |
|------|------|---|---|-------|
| 1 | 2000 | 0 | Materials and supplies | 1 |
| 1 | 2100 | 0 | Materials and tools for administration and teaching | 2 |
| 1 | 2101 | 0 | Materials and office tools | 3 |
| 1 | 2101 | 1 | Letter opener | 4 |
| . | . | . | | . |

CUCoP Disaggregation

Accounting law and agreement that issues COG

| COG Chapter | COG Concepts | COG Items | CABMSOP Concepts | Specific Goods |
|-------------|--------------|-----------|------------------|----------------|
| Materials | | | | |
| Goods | | | | |
| Services | | | | |
| Public Work | | | | |
| Level 1 | Level 2 | Level 3 | Level 4 | Level 5 |

CUCoP - Chart with five levels of disaggregation

Goods Identification and standardization

Design and implement an Procurement Classifier of goods and services that is harmonized with the UN Procurement Classifier and with the the Expense Class Classifier of the SHCP.

Implement a standardization system of goods and services with the one the APF acquires and hires

Objective of the Unique Classifier

Define a unique Classifier for goods and services that Federal Public Administration (APF) acquires and hires

Standardize Categorization of goods and services that APF use

Define correlations between the Unique Classifier and the other instruments of classification that APF use (COG and UN Classifiers)

Define the mechanism for unique classifier updates and correlations

Define business rules of the unique classifier and the correlations for the incorporation in the CompraNet system

Provide information to economic agents in a timely, sufficient and arranged manner that enable execution and optimization of the public procurement system through the adequate classification of goods and services that APF acquires.

Other solutions: GPC – Global Product Classification

GPC is a mandatory classification system for the Global Data Synchronization Network GS1 (GDSN).

The trading partners (vendor and buyers) are required to have the same criteria for product group to ensure effectiveness in the process of data synchronization in GDSN, allowing with it the search, visualization and validation of products.

Other solutions: GPC – Global Product Classification

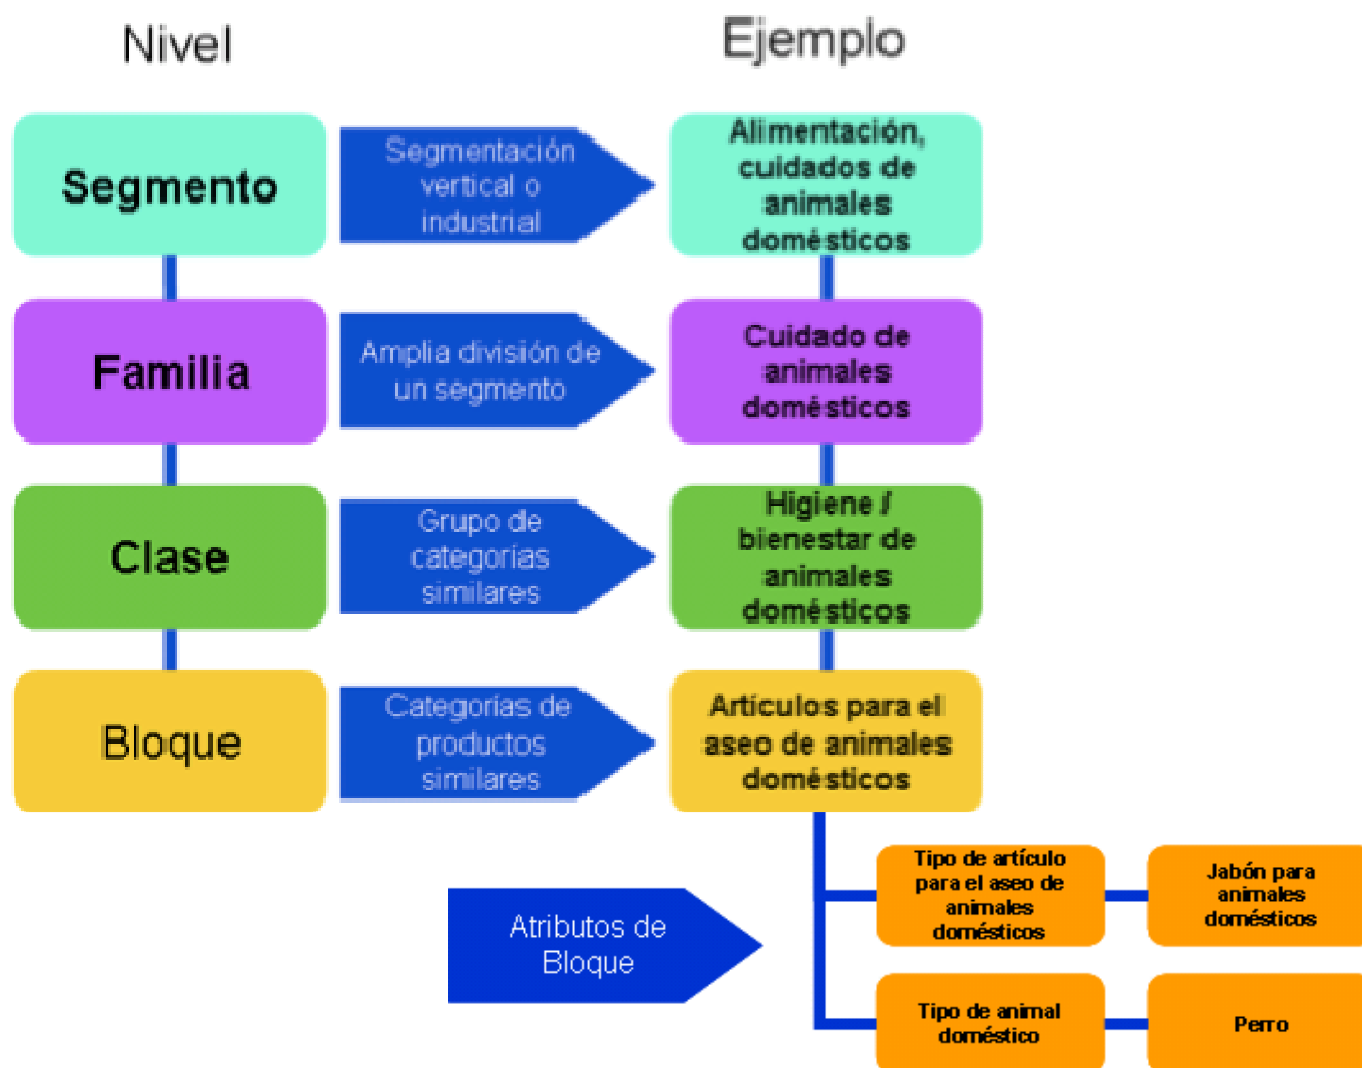

This product group system is based on specific rules, and the compositions is based on four scales:

- Segment
- Family
- Classes
- Brick, with attributes

One Brick incorporates products identified with a standard bar code known as GTIN (Global Trade Item Number).

Other solutions: GPC – Global Product Classification
